COMPARISON OF DIALYSIS TYPES

A short list of the benefits of each type of dialysis

Dialysis is a process in the removal of the was excess fluid from your that your kidneys are n longer able to filter ou	te and Haer blood bloo o men :. HD is in a l	ENTRE HAEMODIALYSIS modialysis (HD) filters your d using a machine and a synthetic abrane, called a dialyzer. In-centre s performed at a scheduled time hospital or dialysis clinic, under close supervision of a clinician.	PERITONEAL DIALYSIS Peritoneal dialysis (PD) uses dialysis fluid and the lining of your abdomen, called the peritoneal membrane, to filter your blood inside your body. PD can be performed in your own home daily.	HOME HAEMODIALYSIS Haemodialysis (HD) filters your blood using a machine and a synthetic membrane, called a dialyzer. Like PD, HD can be performed in your own home, between 3-6 times per week.
